Naturox is the brand of natural preservative that used in PureLUXE pet foods. We buy ONLY raw ingredients (meats and fats) preserved with Naturox and we add Naturox during the time of production with the fat. Levels above 300ppm for a diet with 15% fat is good for a strong shelf life. The levels above far exceed requirements for stable shelf life.

BHA & BHT & EQ are chemical preservatives commonly used in pet food. Less than 1 or 5 part(s) per million is the minimum limit of detection.

Peroxide Value is test outlining if food is in good condition or rancid. Results under 10 say the product is good. Results above 15 say there is a problem with the fat being stabilized and product is going bad. We take 0.54 / 0.15 (fat in formula) to get 3.6 which is perfect.
